        This protein is the soluble human interleukin-1 receptor (IL-IR). by mutating codon 336 (AAG) of the CDNA encoding IL-IR (AAG71901), to form a stop codon (TAG) a truncated receptor, comprising the extracellular domain only, is generated. This truncated receptor retains its ability to bind interleukin-1 but is released extracellularly and therefore is inactive in signal transduction. The methods of the invention are useful for preventing the development of arthritis and for therapeutic use, eg. for repairing and regenerating the connective tissue. The gene is also useful in a compound for parenteral administration for prophylaxis or treatment. (Also see AAR59091 for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      human interleukin-1 receptor; I1-1R; truncated; connective tissue; prevention; arthritis; therapy; repairing; regenerating; ligament; tendon; cartilage; synovium; prophylaxis; treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human interleukin-1 receptor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sox
       The amino acid sequence of the human interleukin-1 (IL-1) receptor (IL-1R) encoded by the insert fragment R3A. The gene (AAQ73764) encodes CC a 65 kD protein precursor which is converted to 63.5 kD protein. The CC protein then undergoes glycosylation to produce a protein of around CC 82 kD. The gene was isolated from a cDNA library, derived from RNA from CC a human T-cell line (designated clone 22), by using a probe prepared CC from the murine IL-1R gene sequence (AAQ73762). Nine positive clones CC complete coding region of the human IL-1R. The purified IL-1 receptor, CC as part of compositions, can be used for the diagnosis of IL-1 or its CC receptors. The receptor will also be useful for the production of CC antibodies used in diagnosis and therapy. In addition, the purified IL-1, CC thereby providing means for regulating the immune or inflammatory CC activities of IL-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Murine; interleukin-1; receptor; glycoprotein; human; IL-1-alpha; expression vector; antibody; diagnosis; therapy; IL-1; IL-1R regulation; regulate; immune; inflammatory; activity; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Вþ
                     And Human interleukin-1 receptor I-type (IL-IR) preferably comprises of CC amino acids 1-319, and more preferably is a soluble protein CC comprising of amino acids 1-312. It is useful as a bone resorption CC comprising of amino acids 1-312. It is useful as a bone resorption CC inhibitor and can be administered intravenously or intramuscutiarly. CC A pharmaceutical composition, containing IL-IR as an active A pharmaceutical composition of treat metabolic diseases of the bone CC ingredient, helps prevent and treat metabolic diseases of the bone CC in the bone, e.g. osteoporosis and hypercalcaemia. The IL-IR is a CC in the bone, e.g. osteoporosis and hypercalcaemia. The IL-IR is a CC superior therapeutic agent to the prior art medications giving a CC more satisfactory effect for metabolic bone diseases caused by CC abnormal bone resorption by inactivating osteoclasts. Bone CC assaying a direct action on osteoclast activity, e.g. by pit

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                             The human interleukin-1 receptor (IL-IR) (AAM06541) amino acid sequence can be deduced from a cDNA clone (AAT45876) isolated from a sequence can be deduced from a cDNA clone (AAT45876) isolated from a human T-cell cDNA library. cDNA encoding the extracellular IL-1 binding domain of IL-IR can be generated by PCR (see also AAT45878-79) and incorporated into a retrovirus vector subsequently used to transfect a packaging cell line. Viral particles are produced that can be used to infect synovial cells in culture. Infected cells are then transplanted into the damaged cartilage of a patient. Soluble IL-IR is expressed that binds to and neutralises IL-1 in vivo, preventing degradation of cartilage, as a means of treating arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             13-MAR-1997
